DEEP LEARNING LABORATORY

EXPERIMENT 14

UNFOLDED RNN ARCHITECTURE VISUALIZATION

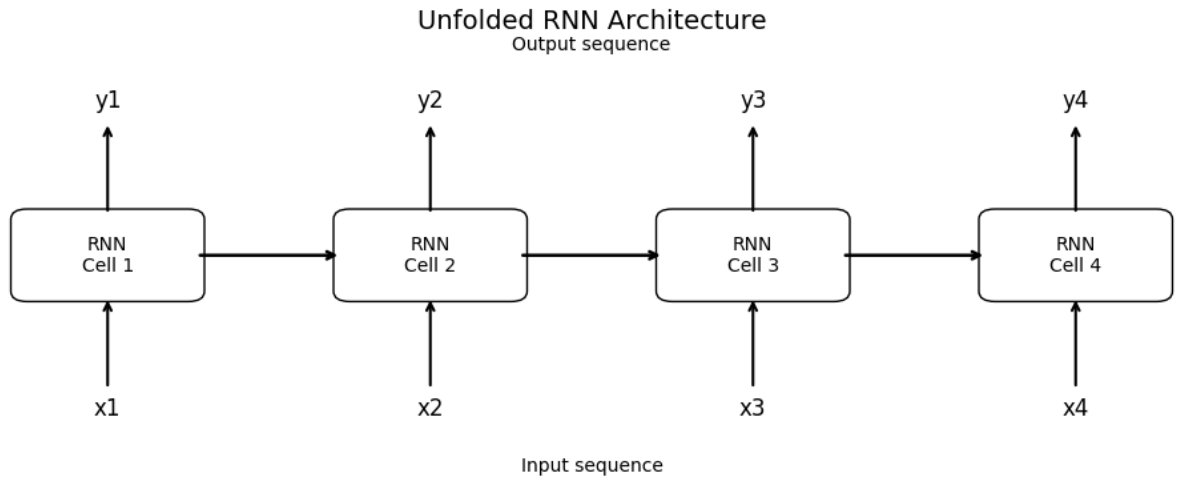
Aim

To visualize an unfolded Recurrent Neural Network (RNN) architecture and illustrate how information is passed across sequential time steps through hidden-state connections.

Output

The diagram represents four RNN cells corresponding to four time steps. Each cell receives an input (x1, x2, x3, or x4), produces an output (y1, y2, y3, or y4), and passes sequential information to the next cell.

Architecture Diagram



Result

The unfolded RNN architecture was visualized successfully. The diagram shows the input and output at each time step and the flow of information between consecutive RNN cells.
